

# Hot Wire CNC Foam Cutter Parts List

This list includes the parts required to build the USB or the Parallel Port versions of the CNC foam cutter. The USB version is my latest build and will be about 30% cheaper than the older parallel port version. Using the older parallel port version is probably the simplest and cheapest way to use Mach3 or LinuxCNC.

All the parts in a convenient PDF with clickable links

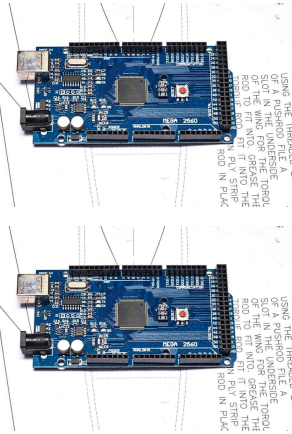

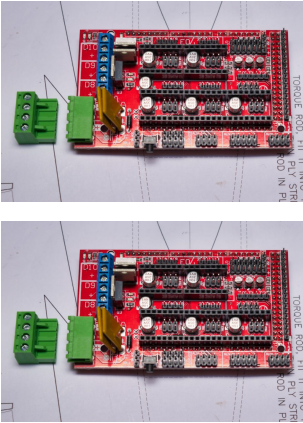

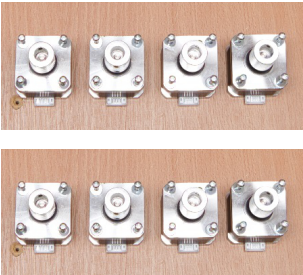

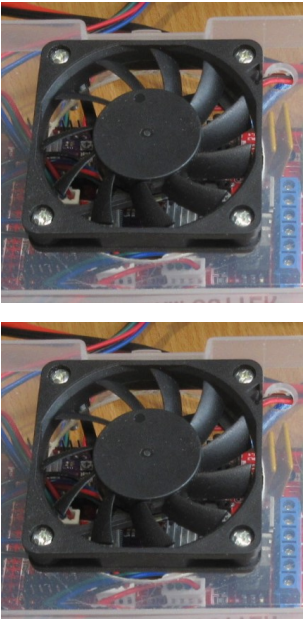

I haven't included any eBay links because they go out of date too quickly but it's worth a look.

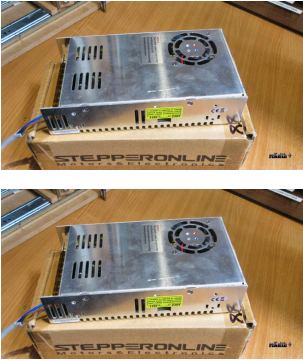

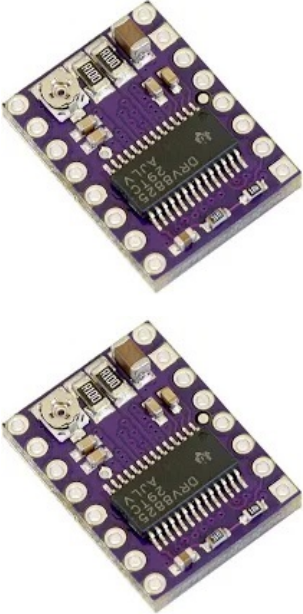

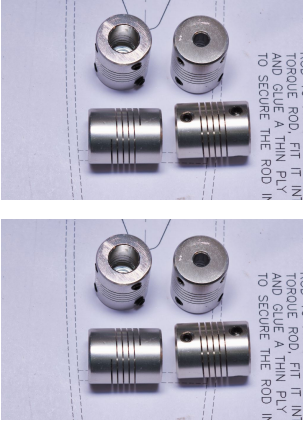

As well as Amazon and AliExpress have some good deals, shipping can sometimes take a while and make sure you check the total price including that. Here's the main CNC page for controllers and steppers <http://s.click.aliexpress.com/e/bfoSYeqU>

The [eBook](#) and [videos](#) have step by step instructions on how to build your own CNC foam cutter. There is a small charge for the [plans](#).

## USB Version

<p>4</p>		<p>Flexible couplers x 4 M10 x5mm for NEMA17 M10 x 6.35 for NEMA23</p>	<p><a href="#">Get the couplers here</a> <a href="#">NEMA17 are 5 mm x 10</a></p>

4	 	10 x 1.5mm T-Nuts x 4	<a href="#">USA Price Check</a> <a href="#">UK Price Check</a>
40	 	M6 Cross Dowels Bolts 50mm and Barrel Nuts x40	<a href="#">Get the Cross Dowels here</a>
4	 	10 x 1.5mm x 1000mm (cut to size) Threaded Rod x 4 If you prefer to use T8 Lead Screws M5 x 8mm couplers will be needed as well. 450mm for vertical 750mm for horizontal The step/mm will need to be re-calculated as well.	Purchase from a local DIY store.  <a href="#">Alternative T8 lead screws UK</a>  <a href="#">Alternative T8 lead screws USA</a>
1		12 mm MDF Moisture resistant or paint after the build.	Purchase from a local DIY store.

# Parallel Port Version

If you decide to build the parallel port version then use one of the controllers below. The NEMA17's listed above can still be used. If you are building a larger machine then the NEMA23's listed below may be a better choice
